BENEFIT NOTES: PRIOR AUTHORIZATION, STEP THERAPY AND QUANTITY LIMITS

Your prescription benefit program may include prior authorization, step therapy, and/or quantity limits for certain medications in order to ensure safe and appropriate use.

Prior authorization requires you and your doctor to acquire approval from DirectRx before the medication can be dispensed.

Step therapy is when your prescription benefit requires you to try another medicine (typically a generic) before beginning the medication prescribed by your doctor (usually a brand).

Quantity limits only allow you to get a maximum dosage or quantity of specific medications based on clinically accepted prescribing standards.
